## RETAIL TRADE

## COMMERCE DE DÉTAIL

Retail trade by county or census division  
and incorporated places of 10,000  
population and over, 1966

Commerce de détail, par comté ou division de recensement  
et par localité constituée de 10,000 habitants  
et plus, 1966

The results as shown in this advance report, cover incorporated cities and towns but not metropolitan and other major urban areas; the regular series of bulletins to follow will show figures for these areas and other details on the 1966 Census of retail trade.

Les résultats publiés dans le présent rapport préliminaire ont trait aux cités et villes constituées, mais non aux régions métropolitaines et autres grandes agglomérations urbaines; la série régulière des bulletins qui suivra indiquera les chiffres pour ces régions et donnera d'autres renseignements sur le recensement de 1966 du commerce de détail.

Total trade, especially by cities and towns, reflects changes that took place between 1961 and 1966 in the structure of merchandising. Thus, the advent of new shopping areas, whether shopping centres as defined, or singly located discount department or other large stores, changed the trade totals as given by the 1961 Census. Other factors that affect the trade patterns of a city or town are urban redevelopment, and whether any of the aforementioned new construction of retail outlets has taken place within or just outside the corporate boundaries. Also, the opening of large stores, some carrying a broad range of commodities, may be partly the reason for any reductions in the number of stores (generally small ones) even though population and total sales increase. For the first time in this 1966 Census, small retailing locations of less than \$500 annual sales have been excluded. Concessions in department stores formerly treated and counted as separate business locations have, for 1966, been added to the store in which they are located, thereby reducing the store count to some extent.

Le commerce total, particulièrement dans les cités et villes, reflète les changements de structure qu'a subis le commerce entre 1961 et 1966. Ainsi, l'apparition de nouveaux débouchés (centres commerciaux, magasins à rabais ou autres grands magasins) a fait changer les chiffres du commerce obtenus au recensement de 1961. Le réaménagement urbain est un des facteurs qui ont modifié la physionomie du commerce dans les cités et villes tout comme l'emplacement (à l'intérieur des villes ou à la périphérie) des nouveaux débouchés susmentionnés. De même la diminution du nombre de magasins (des petits, en général) malgré l'accroissement de la population et des ventes, peut être en partie attribuée à l'ouverture de grands magasins, dont certains offrent une vaste gamme de marchandises. Pour la première fois, au recensement de 1966, les petits établissements de détail dont le total des ventes annuelles est inférieur à \$500 ont été exclus. Les concessions situées dans les grands magasins qui étaient jadis traitées et comptées comme des établissements commerciaux distincts ont, en 1966, été comptées avec le magasin où elles sont situées, ce qui a réduit le nombre de magasins dans une certaine mesure.

In general, no major changes in trade definitions, which would shift a business classification from the retail to either the service or wholesale sectors, were undertaken in 1966 and the retail trade data as shown here are, therefore, comparable to that of 1961.

En général, il n'y a pas eu en 1966, dans la définition des commerces, de modifications importantes de nature à faire passer une entreprise du secteur de détail au secteur des services ou à celui du commerce de gros et, par conséquent, les données sur le commerce de détail publiées ici sont comparables à celles de 1961.

Descriptions of boundary changes at both the municipal and county levels are available in the census bulletins, and will also be identified in the retail census bulletin to follow shortly, Catalogue 97-603, which will show 1961-1966 comparisons for counties, census divisions and incorporated places of 2,000 population and over.

Les descriptions des modifications des limites des municipalités et des comtés se trouvent dans les bulletins du recensement; on pourra aussi les trouver dans le bulletin du recensement du commerce de détail, n° de catalogue 97-603, qui paraîtra prochainement et qui fera voir les comparaisons entre 1961 et 1966 à l'égard des comtés, des divisions de recensement et des localités constituées de 2,000 habitants et plus.

The results which follow are subject to minor revisions and the census is also deficient by a small degree of underenumeration. While no accurate assessment of the latter is available, evidence points to a possible 2% in number, but much less in sales.

Les résultats ci-après sont sujets à de légères rectifications et le recensement est défectueux du fait du sous-dénombrement. Il est impossible d'en évaluer exactement l'importance, mais certaines indications permettent de dire que ce sous-dénombrement est de 2 p. 100 pour ce qui est du nombre et de beaucoup moins pour ce qui est des ventes.
